

CSR ACTIVITIES IN 2022

In 2022 the relationship with the local communities and local stakeholders has remained very successful. WEBG team has regular meetings with the representatives of the Municipality of Kovin, especially regarding the annual donation.

During the project development phase, WEBG entered into an agreement with Municipality of Kovin that the operating company would donate 2% of its' annual net profits to the Municipality. The annual profit is determined at the end of June each year after the financial statements is published.

The donation can be used to fund projects relating to health, education, sports, infrastructure, and culture in the Municipality of Kovin. Once the amount of the donation is known, the Municipality proposes the projects that they intend to support that year. WEBG and Municipality formed a committee consisting of both Municipality and WEBG representatives which make decisions regarding the projects.

Part of the funds from 2021 (2% of the net profit from 2020) was directed to the renovation of public parking and one of the central streets in the village of Mramorak (works completed in September 2022).

Works on regular road maintenance in the wind farm were carried on in September 2022.

WEBG organised a site visit for students from the Faculty of Electrical Engineering, University of Belgrade on 12 May 2022. Fifty students and their professors visited the Čibuk 1 wind farm and were provided with a tour of the command building, switch gear and a WTG. The collaboration with the faculties of engineering will continue to provide students of engineering with strong knowledge and expertise in renewable energy sources.
